iphone app iphone Hello all. I have a question. I'm interested in decoding some videos from my Windows based N64 and have been unable to find the program on the web. Is anyone aware of one? I have searched, but maybe not correctly. If it exists, I'd like it to be compatible with the NTSC/PAL system, though ideally I'd like it to work with both. Cheers. Yes, it's unfortunately illegal in most countries. If you make it for the PAL region, you could probably get away with it, as there are a lot of PAL users who would probably pay for it. Why don't you make it available online? I will surely buy it. When do you plan to put the DVD out on the market? what about vlc for example? i just noticed vlc for the mac os x has NTSC and PAL settings. its PAL and NTSC what about the N64? I use WinDVD for the N64. It has both NTSC and PAL in the main menu. I use one for the USA, one for other countries. There's also a "configure" option to change the format if you want to. Haven't tried it on PAL though. Three-dimensional analysis of the craniofacial profile of patients with treated unilateral cleft lip and palate. This study was designed to evaluate the effects of the advancement of the cleft alveolus on the craniofacial profile, to compare the profile changes between the cleft and noncleft sides in treated cleft patients, and to examine the effects of early maxillary expansion. Thirty-four patients (22 girls and 12 boys) with complete cleft lip and palate treated by the Bernhard technique were included in this study. Patients were divided into two groups based on the surgical age: early maxillary expansion group (2-6 years old) and late maxillary expansion group (>6 years old). The cephalometric analysis was performed on frontal cephalographs to evaluate the changes in the craniofacial profile. The facial profile improved in both the early and late maxillary expansion groups. The angle between the sella-nasion plane and Frankfort horizontal plane decreased on both the cleft and noncleft sides in the early and late maxillary expansion groups. In the early maxillary expansion group, the angle between the sella-nasion plane and the sagittal line of the mand 82157476af
